**Wireless-F Infrared Flasher**

Infrared Flashlight for the Headstages of the Wireless2100-System and the Wireless-System

Wireless-System headstage
Receiver LEDs

W2100-System headstage
Receiver LEDs

Infrared Flasher

Use the infrared flasher to illuminate the infrared receiver LEDs on the headstages.

Important: Please pay attention to the orientation of the flasher as the infrared beam has to meet the receiver LEDs on the headstage directly!

Infrared Flashlight

The infrared flashlight is used for switching the wireless headstage „On" when the system is in „Switched Off" mode. Please see the Wireless-System or W2100-System manuals for detailed information of the software and hardware control.
